1. Objective

This "green procurement standard appendix" aims to provide the standard of environmental control substances of the procurement goods by order of RoHS Directive and REACH Regulation and to promote production which considers the environment.

2. Application

This green procurement standard appendix is intended for all parts, materials, packaging, and other articles (hereafter called the "procurement goods") used for Tamura product.

3. Definition of Terms

(1) Controlled Environmental Substance

Chemical substances contained in delivered products specified by Tamura Group which are judged to have marked impacts on global environment and human bodies.

(a) Containing banned substances

(Chemical substances that must not be used in procurement goods)

Any of the substances shown below falls into this range.

- Chemical substance contaminated in products that is banned by existing laws and regulations or a substance where an upper limit of concentration is specified.
- Chemical substances that are banned in product contamination by the Tamura Group prior to the effective period specified by a treaty, law, or regulation.
- Chemical substances for which the Tamura Group promotes the ban on usage in products.

Containing banned substances are managed using the controls levels 1) to 3) and the Exclusion.

1) Level 1

The range of limitation that must not be used in procurement goods.

2) Level 2

The usage of these substances in products procured by a specified date is banned; if used, the content must be made clear.

3) Level 3

The substances being reviewed for transition to Level 2 in the future and having the usage status assessed for the substances and their application

4) Exclusion

Contents which are excluded from Levels 1 to 3 in consideration for items exempt from laws.

(b) Substances requiring communication of information

Chemical substances for which it is necessary to assess the containment of substance and the containment amount. However, does not restrict intentional use. In the case of an overlap with Containing banned substances, priority is given to the Containing banned substances. Further information is given in "4.2 Information Transmission Substances."

(2) Homogeneous material

A material that cannot be mechanically disjointed into different materials.

(3) Contained

Addition, filling, mixture, or adhesion of a chemical substance regardless of whether it is intentionally or not.

(If the product may be subjected to contamination from molds, tools, machines, equipment, etc. with which it comes into direct contact, the part which touches the product must be considered to fall under the scope of banned environmentally hazardous substances.)

(4) Impurities

It means chemical substances contained in natural materials, but could not be completely removed by industrial technology in the refining process for industrial material, or substances occurring in synthetic reaction, but could not be eliminated by industrial technology.

(5) Intentional addition

Deliberate use in the formulation of a product where its continued presence is desired to provide a specific characteristic, appearance or quality.

In the case of the Act on the Evaluation of Chemical Substances and Regulation of Their Manufacture, etc., management based on the concept of Best Available Technology (BAT: Best Available Technology/Techniques) is required if unintended substances (impurities) are by-produced.

(6) Chemical substance

Substances which are single elements or composites and that exist naturally or are obtained from a production process.

(7) Article

An item of specific shape, appearance or design created during manufacture which substantially determines functions in final user rather than functions provided by its chemical composition.

Note: Examples of articles are metal plates, gears, integrated circuits, electric appliances, transport equipment, etc.

(8) Part

An article to be manufactured until it turns into an end product.

4. Environmental control substances

4.1. Containing banned substances

The scope includes chemical substances contained in procured items that are determined to have a significant environmental impact on the global environment or humans that meet any of the following conditions:

- Chemical substance contaminated in products that is banned by existing laws and regulations; or a substance where an upper limit of concentration is specified.
- Chemical substances that are banned in product contamination by the Tamura Group prior to the effective period specified by a treaty, law, or regulation.
- Chemical substances for which the Tamura Group promotes the ban on usage in products.

We may ask you to submit a "non-use guarantee." If the format is specified, please submit the documents in the specified format.

Note : The detailed contents of banned substance group mention it in (Table 2)

4.3. Additional requirements concerning plastic recycling materials

Material fracture occurred at a factory controlled by the suppliers (junk products, such as runners) use only, and circulations that the component chemical substance doesn't be guaranteed clearly are banned to use. In addition to the above, material fractures occurred at a factory which concurrently produces a product containing phthalate, which is a target of RoHS Directive, must not be used.

Note: Since phthalate is easily transmitted and mixed, recycling material fractures occurred a factory which concurrently produces a product containing phthalate is prohibited for the present. This restriction shall be reviewed at any time as needed.

4.4. Supplementary provision

The "TAMURA Group Green Procurement Standards Appendix ver.15" shall start to be applied from March 1, 2023.
